CISA Known Exploited Vulnerabilities Content Pack

Empower BigFix users with the ability to quickly and continuously report on compliance against CISA's Known Exploited Vulnerabilities (KEVs) on BigFix-supported platforms

HCL BigFix

BigFix customers can quickly and continuously report on compliance against CISA's Known Exploited Vulnerabilities (KEVs). Research has shown that many cybersecurity incidents result from well-known vulnerabilities which have gone unpatched. Lengthy delays in identifying and remediating known vulnerabilities may lead to greater security risk, data breaches and ransomware attacks. Although the Cybersecurity and Infrastructure Security Agency (CISA) published a list of Known Exploited Vulnerabilities (KEVs), many Federal and non-Federal organizations struggle to remediate them in a timely and efficient way.

The BigFix Known Exploited Vulnerabilities (KEVs) Content Pack delivers a powerful solution that speeds the identification of CISA KEVs so IT organizations can plan and execute remediation plans to better protect the organization against cyber attacks.

The Content Pack slashes the time organizations take to research, develop and test fixes which is particularly important for Federal organizations that must adhere to Binding Operational Directive (BOD) 22-01, reducing the significant risk associated with known exploited vulnerabilities. Many non-Federal organizations incorporating CISA's KEVs as a prioritized catalog of vulnerabilities to address will also benefit from the Content Pack.

Highlights

- Provides tested and ready-to-deploy Fixlet and patch content, eliminating costly development and testing effort while shrinking vulnerability exposure time.

- The Content Pack is leveraged by the CVE Search Dashboard, which simplifies the identification of the KEVs recommended by the Cybersecurity and Infrastructure Security Agency (CISA.)

- Available as an add-on feature to BigFix Lifecycle, BigFix Compliance, and BigFix Remediate.

About HCLSoftware

HCLSoftware develops, markets, sells, and supports product families in the areas of Digital Transformation, Data, Analytics & Insights, AI & Automation and Enterprise Security platforms. HCLSoftware is the cloud-native solution factory for enterprise software and powers millions of apps at more than 20,000 organizations, including more than half of the Fortune 1000 and Global 2000 companies. HCLSoftware's mission is to drive ultimate customer success with its IT investments through relentless product innovation.
